Put your searches into overdrive! A simple Clarion source utility (API and example) to search any drive and folder! FAST alternative to Windows File Search dialog. Search files, folders, text, or file contents. Search across network drives and calculate CRC32 values. Also includes QuickSearch!

gFileFind! Clarion Search Add-On!

Put your searches into overdrive! A simple Clarion source utility (API and example) to search any drive and folder! FAST alternative to Windows File Search dialog. Search files, folders, text, or file contents. Search across network drives and calculate CRC32 values. Also includes QuickSearch!

Search Features:

- Search for files in several drives, directories.
- Search based on extension, file size, file date, file contents, and more!
- Do additive searches - search again without clearing the current results.
- Dump results to a printer or ASCII file.
- Tag and manipulate files - copy, move, delete. Also rename and launch individual files.
- Drill-down text searches.
- Plus much more!

CLARION SOURCE/TEMPLATE Features:

- Includes a copy of the QuickSearch Utility.
- Create automated file utilities that allow you to use the results of your file search to process files.
- Add the extension template to your application, import the ready-made procedures from the example, or you can modify the screens to match your individual look and feel of your application.
- Provide a list of images for your user with auto-preview for your user to select from to include in their application. Much better and quicker than the standard file dialog as it can display several folders at the same time.
- Create a document list and launch the document from within your application. For example, launch all PDF files in C drive.
- Specify a list of files to backup and using the CRC32 code check for changes for conditional backups.
- Provide a file search procedure where your users can check for specific text in any or all drives, folders, and subfolders, using full names or wildcard searches. Add your own functions for additional file manipulations. For example, search for "function" in all \*.clw,\*.tp\* files in the C drive, or search for "contract" in all \*.DOC files in the C:\business folder.
- Includes search API source in .clw, .inc for direct inclusion into your application. NO BLACK BOX DLL'S!
- For Clarion 6.0-6.3.
- ABC or Legacy Template. Example application uses ABC. Example source is included.

- Price includes forum/email support for the current major version when purchased from us (ie 5.X versions).
